PROFESSIONAL SUMMARY

Backend Engineer with ~2 years building scalable B2B web applications. Core contributor responsible for ~50% of the backend of a customer-experience analytics platform — PostgreSQL schema design, 100+ REST APIs, Redis caching, and performance optimization. Strong in Node.js, TypeScript, NestJS, and PostgreSQL. Outside of work, builds LLM/RAG and developer-tooling side projects using the Anthropic SDK, pgvector, and the Model Context Protocol.

TECHNICAL SKILLS

Backend:	Node.js, NestJS, Express, TypeScript, REST APIs, SSE, BullMQ
Databases & Caching:	PostgreSQL, Redis, pgvector, MongoDB, Drizzle ORM, TypeORM
Cloud & DevOps:	AWS (EKS, RDS, CloudFront), Docker, Kubernetes, Linux
Frontend:	React, Next.js, Redux, Tailwind CSS
AI / LLM (side projects):	Anthropic SDK, Model Context Protocol (MCP), RAG, Voyage embeddings
Languages:	TypeScript, JavaScript, Python, C++, SQL
Tools & Platforms:	Git, GitHub, Postman, Vercel, Neon, Agile/Scrum

WORK EXPERIENCE

Software Developer | Zykr, New Delhi

June 2024 – Present

- Own ~50% of the backend for a B2B customer-experience analytics platform — from PostgreSQL schema design through production-ready services.
- Designed and delivered **100+** REST APIs (Node.js, Express/NestJS, TypeScript) powering feedback collection, survey management, and analytics reporting modules.
- Modeled and normalized **15+** PostgreSQL tables with tuned indexing strategies to support complex analytical queries over large datasets.
- Built Redis caching for high-frequency endpoints, reducing redundant database load and improving p95 response time.
- Implemented asynchronous job processing with BullMQ (retry policies + dead-letter handling) for background report generation and survey ingestion.
- Contributed React/Next.js dashboard and data-visualization components for the analytics platform.

Tech Stack: TypeScript, Node.js, NestJS, Express, PostgreSQL, Redis, BullMQ, React, Next.js

PROJECTS

Reverse Resume — Citation-Grounded RAG Portfolio

[Link](#)

- Built a citation-grounded RAG site over **4** indexed code repos and **30+** documentation snippets, achieving a **1.0 retrieval eval score**; every answer cites real code with [n] markers backed by pgvector semantic search and BM25 fallback.
- Designed audience-aware voice steering (curious / recruiter / engineer) and a 4-tab answer card (TL;DR / Impact / Code / Story), with in-process token-bucket rate limiting and a daily LLM spend cap; shipped across **13 atomic implementation phases**.

Tech Stack: TypeScript, Next.js 15, PostgreSQL + pgvector, Drizzle ORM, Voyage embeddings, Anthropic SDK, Vercel, Neon

Job-MCP — Model Context Protocol Server

[Link](#)

- Built an MCP server exposing ~12 **TypeScript tools** (search-jobs, match-resume, refine-message, adaptive search, ...) over stdio transport, consumable from Claude Desktop, Cursor, and any MCP-compatible client.
- Engineered fail-fast environment validation with dependency-injected tool registration — missing API keys surface at process startup rather than first tool call, and every handler is testable in isolation.

Tech Stack: TypeScript, Model Context Protocol SDK, Node.js

EDUCATION

B.Tech in Computer Engineering

Delhi Technological University, New Delhi | CGPA: 8.26/10

2020 – 2024

ACHIEVEMENTS

- Solved **400+** Data Structures and Algorithms problems across LeetCode, GeeksforGeeks, and CodeStudio.
- 5-star rated in Problem Solving on HackerRank.
